SUMMARY

Software Engineer with 3+ years of experience specializing in Flutter for cross-platform mobile, web, and desktop applications. Strong expertise in Bloc/Provider state management, Clean Architecture, CI/CD pipelines, and real-time systems (MQTT, WebSocket).

Experienced in Android Native (Kotlin/Java) and modern web technologies (ReactJS). Proven ability to deliver scalable solutions, optimize performance, and collaborate directly with stakeholders.

Actively leveraging AI tools (ChatGPT, Cursor, Claude) to accelerate development, improve code quality, and enhance productivity.

WORK EXPERIENCE

Software Engineer

Quoc Viet Trading and Engineering Co., Ltd.

(Oct 2024 - Present)

Syrup Mixing System

5/2025 - Present

Team size: 10

Description:
A web and cross-platform application system for Suntory PepsiCo factories that manages and automates the syrup mixing process, ensuring accurate ingredient control, batch tracking, and efficient production operations.

- Technologies:**
- Core Framework: flutter, dart
 - State Management & Navigation: bloc, flutter_bloc, go_router
 - Architecture: Clean Architecture
 - Dependency Injection: get_it
 - Network & Data: dio, drift (with drift_flutter), REST APIs
 - Utilities: excel, pdf, printing, rxdart, logger, uuid
 - UI & Visualization: community_charts_flutter, two_dimensional_scrollables
 - Code Generation: build_runner, json_serializable, drift_dev
 - CI/CD & Tools: fastlane, jenkins, msix

- Responsibility:**
- Team Leadership: mentored 1 developer, managing task and code reviews.
 - Release Management: Owned app releases, including merging, versioning, and publishing to App Store, Google Play, and Microsoft Store.
 - CI/CD & DevOps: Built and maintained Jenkins/Fastlane/PowerShell pipelines for automated testing and deployment.
 - Quality Assurance: Implemented unit tests to ensure stability and reliability.
 - Stakeholder Engagement: Conducted onsite user training and worked directly with clients on requirements.

- AI-Assisted Development:**
- Used Claude and Antigravity to:
 - Design system architecture and workflows
 - Generate complex business logic and data flows
 - Assist in debugging and performance tuning
 - Applied AI for:
 - Code generation (Bloc, API layers, models)
 - Writing unit tests and improving reliability

Smart Form Interface

10/2024 - 4/2025

Team size: 10

Description:
A multi-platform web and application solution for Suntory PepsiCo factories, streamlining report generation through digitized forms, automated workflows, and operational data visualization.

SKILLS

Flutter

Android Studio

Android (Java, Kotlin)

Git

Reactjs

HTML, CSS

Claude

ChatGPT

Node.js

Cursor

Antigravity

EDUCATION

Bachelor's degree, Information Technology

Ho Chi Minh City University of Foreign Languages – Information Technology

(Sep 2019 - Jul 2023)

CERTIFICATES

TOEIC Listening Reading 705

(Sep 2022)

COURSES

- AWS Cloud Technical Essentials 
- (Mar 2024)
- Migrating to the AWS Cloud 
- (Apr 2024)
- Architecting Solutions AWS 
- (May 2024)
- Create High-Fidelity Designs and Prototypes in Figma 
- (Sep 2024)

 portfolio-minhtri.netlify.app

Technologies:

- Architecture: Clean Architecture
- State Management & Navigation: flutter_bloc, hydrated_bloc
- Dependency Injection: get_it
- Storage & Database:drift ,shared_preferences
- Networking & Data: http, json_serializable for code generation.
- UI & Visualization: community_charts_flutter, excel
- CI/CD & DevOps: jenkins, fastlane

Responsibility:

- Feature Development: Develop cross-platform features (Mobile, Web, Windows) translating key user requirements into functional application modules.
- Performance Optimization: Ensure smooth rendering and fast data processing, particularly for complex form handling and report generation.
- DevOps & CI/CD:
 - Build and maintain pipelines using Jenkins and fastlane.
 - Manage releases for App Store, Google Play, and Microsoft Store
- Stakeholder Engagement: Conduct onsite training for end-users and collaborate directly with clients to gather and refine technical requirements.

AI-Assisted Development:

- Used Cursor AI to:
 - Refactor large Flutter codebase efficiently
 - Generate complex form logic and validation
 - Improve Bloc architecture and maintainability
- Increased development speed and reduced manual coding effort

**AI-ASSISTED DEVELOPMENT
EXPERTISE**

Strong experience integrating AI into development workflows:

- ChatGPT (debugging, code generation, testing)
- Cursor AI (refactoring, productivity optimization)
- Claude / Antigravity (architecture & complex logic)

Impact:

- Reduced development time
- Improved code quality and maintainability
- Enhanced testing and reliability

Software Engineer

(Jan 2023 - Oct 2024)

Onsky Health International, Vietnam

Onsky SkyHealth

1/2023 - 10/2024 | Team size: 9

Description:

Healthcare monitoring mobile application for remote patient and child observation, integrating IoT device management and live camera streaming.

Technologies:

- Mobile Development: Android Native (Java/Kotlin), Flutter (Add-to-App)
- Networking & Real-time: Retrofit, MQTT, RESTful APIs
- Integrations: Third-party Camera SDKs (e.g., VStarCam), Firebase, WebView

Responsibility:

- Maintained and optimized native Android codebase, resolving complex issues to ensure app stability.
- Advanced Camera Integration: Integrated specialized third-party SDKs (VStarCam) to enable robust live streaming and remote camera control features.
- Hybrid Architecture: Embedded Flutter modules into the native Android app

Assisted Development:

- Utilized ChatGPT as a supporting tool to:
 - Explore solutions and implementation approaches for complex features
 - Generate ideas for handling real-time streaming, MQTT communication, and hybrid architecture
- Troubleshoot issues and validate technical approaches during development

Onsky SkyCare

1/2023 - 10/2024 | Team size: 9

Description:

Developed web and mobile applications integrated with IoT medical devices for monitoring and device management in healthcare.

Technologies:

- Core: Flutter, Dart, Code Generation
- State Management & Navigation: Provider, go_router
- Networking & Real-time: HTTP, Chopper, MQTT, WebSockets, RESTful APIs, Firebase, Push Notifications
- Visualization: fl_chart
- DevOps: Fastlane, CI/CD pipelines

Responsibility:

- Feature Development: Developed and delivered mobile features using Flutter
- Quality & Automation: Authored comprehensive unit tests and built robust CI/CD pipelines to automate testing and deployment.
- Release Management: Managed the end-to-end publishing process for applications on the Google Play Store and Apple App Store.

AI-Assisted Development:

- Used ChatGPT to:
 - Accelerate feature implementation and debugging
 - Generate reusable code and optimize UI components
 - Support API integration and real-time data handling
- Improve unit testing coverage
